

## SOVIET SMD V1 – ASSEMBLY GUIDE

This document will help you to build your module without any trouble! We will give the order in which the components should be placed on the boards to make your life easier during assembly.

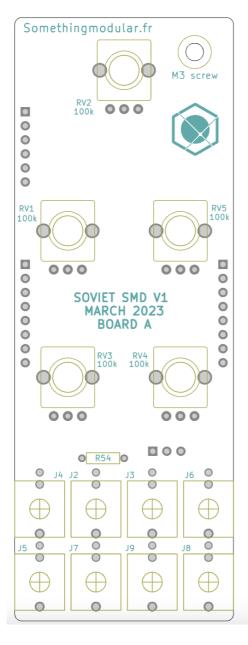

If you want more information about how to build Eurorack modules and what tools you should have, go check our DIY electronics advice on our website: **somethingmodular.fr** 

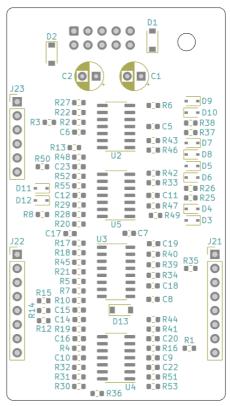

We also made an **online interactive BOM** so you can check components placement.

And again:

### THANKS YOU FOR CHOOSING OUR KIT!! YOU'RE AWESOME!!

Now let's build this module, your module!

# SOVIET SMD V1 – ASSEMBLY GUIDE

Let's start by working on board B:

## **ELECTROLYTIC CAPACITORS**

Electrolytic Capacitors are Polarized!

Mind the polarity: the long leg is the positive lead, negative lead is denoted by a white line.

Qty	Value	Package	Voltage	Reference designator
2	10μF	D5.0 * P2.0	≥ 25 V	C1, C2

## **POWER CONNECTOR**

This component should be soldered on the back of the PCB. Mind pin 1.

Now put Board B aside and let's work on Board A:

RESISTORS				
Qty	Value	'alue Color Code		Reference designator
1	1k	-(1111)-	Brown, black, black, brown, brown	R54

### **READ THIS BEFORE SOLDERING POTS AND JACKS:**

Install potentiometers and mini-jacks onto board A without soldering. Now place the front panel, secure few components (top potentiometer and bottom jacks for example). Check for any mechanical stress on components, PCB or panel. If there is none then you can solder.

Remember to do this little routine every time you put front panel components, soldering without putting the front panel components first you risk to have hard time to align the components to the panel holes.

3.5mm Jack Sockets		
Qty	Value	Reference designator
8	PJ301M-12	J2, J3, J4, J5, J6, J7, J8, J9

Potentiometers - ALPHA 9MM POTS			
Qty	Value	Reference designator	
5	100k linear	RV1, RV2, RV3, RV4, RV5	

## SOVIET SMD V1 – ASSEMBLY GUIDE

After soldering, you can now take off the front panel, put it aside.

## FEMALE AND MALE PIN HEADERS

Place the female pin headers on the front side of board B, place the male pin headers on the back of board A. Put them inside each other.

**Secure** the spacer between board A and B.

**Solder** both female and male pin headers.

Qty	Value	Reference designator
1	1x06 Female Pin Header	J23
1	1x06 Male Pin Header	J13
2	1x08 Female Pin Header	J21, J22
2	1x08 Male Pin Header	J11, J12
1	1x03 Male Pin Header	J10 (at the back of Board A)

Put back the panel as you did before. Now you can secure all jacks and pots nuts. Once you are done. Put the potentiometer knobs on.

### CONGRATULATION, you've just finished building your new module!

### **FIRST POWER UP TEST:**

**Before powering up your module**, use a multimeter to check that there is no short between +12V, -12V and Ground rails.

Now you can power up your module: Connect the power ribbon cable (the red wire on the power ribbon cable corresponds to -12V) and **Enjoy!** 

### YOU'RE READY TO ROLL! ENJOY YOUR NEW MODULE!
